

## MediaInfo源代码分析 4：Inform()函数

2013年10月08日 21:40:09 阅读数：4006

MediaInfo源代码分析系列文章列表：

[MediaInfo源代码分析 1：整体结构](#)

[MediaInfo源代码分析 2：API函数](#)

[MediaInfo源代码分析 3：Open\(\)函数](#)

[MediaInfo源代码分析 4：Inform\(\)函数](#)

[MediaInfo源代码分析 5：JPEG解析代码分析](#)

我们来看一下MediaInfo中的Inform()函数的内部调用过程

首先Inform()函数封装了MediaInfo\_Internal类中的Inform()函数

```
[cpp]
1. //返回文件信息
2. String MediaInfo::Inform(size_t)
3. {
4.     //封装了一层
5.     return Internal->Inform();
6. }
```

查看一下MediaInfo\_Internal类中的Inform()函数的源代码：

```
[cpp]
1. // 获取信息
2. Zstring MediaInfo_Internal::Inform()
3. {
4.     CS.Enter();
5.     if (Info && Info->Status[File_Analyze::IsUpdated])
6.         Info->Open_Buffer_Update();
7.     CS.Leave();
8.
9.     if (MediaInfoLib::Config.Inform_Get()==_T("MPEG-7"))
10.         return Export_Mpeg7().Transform(*this);
11.     if (MediaInfoLib::Config.Inform_Get()==_T("PBCore") || MediaInfoLib::Config.Inform_Get()==_T("PBCore_1.2"))
12.         return Export_PBCore().Transform(*this);
13.     if (MediaInfoLib::Config.Inform_Get()==_T("reVTMD"))
14.         return _T("reVTMD is disabled due to its non-free licensing."); //return Export_reVTMD().Transform(*this);
15.     //获取相应的信息
16.     if (!(
17.         MediaInfoLib::Config.Inform_Get(__T("General")).empty()
18.         && MediaInfoLib::Config.Inform_Get(__T("Video")).empty()
19.         && MediaInfoLib::Config.Inform_Get(__T("Audio")).empty()
20.         && MediaInfoLib::Config.Inform_Get(__T("Text")).empty()
21.         && MediaInfoLib::Config.Inform_Get(__T("Chapters")).empty()
22.         && MediaInfoLib::Config.Inform_Get(__T("Image")).empty()
23.         && MediaInfoLib::Config.Inform_Get(__T("Menu")).empty()
24.     ))
25.     {
26.         //获取各种信息
27.         //Retour即为返回的字符串
28.         Zstring Retour;
29.         Retour+=MediaInfoLib::Config.Inform_Get(__T("File_Begin"));
30.         Retour+=MediaInfoLib::Config.Inform_Get(__T("General_Begin"));
31.         Retour+=Inform(Stream_General, 0, false);
32.         Retour+=MediaInfoLib::Config.Inform_Get(__T("General_End"));
33.         if (Count_Get(Stream_Video))
34.             Retour+=MediaInfoLib::Config.Inform_Get(__T("Video_Begin"));
35.         for (size_t I1=0; I1<Count_Get(Stream_Video); I1++)
36.         {
37.             Retour+=Inform(Stream_Video, I1, false);
38.             if (I1!=Count_Get(Stream_Video)-1)
39.                 Retour+=MediaInfoLib::Config.Inform_Get(__T("Video_Middle"));
40.         }
41.         if (Count_Get(Stream_Video))
42.             Retour+=MediaInfoLib::Config.Inform_Get(__T("Video_End"));
43.         if (Count_Get(Stream_Audio))
44.             Retour+=MediaInfoLib::Config.Inform_Get(__T("Audio_Begin"));
45.         for (size_t I1=0; I1<Count_Get(Stream_Audio); I1++)
46.         {
47.             Retour+=Inform(Stream_Audio, I1, false);
48.             if (I1!=Count_Get(Stream_Audio)-1)
```

```

40.         if (I1!=Count_Get(Stream_Audio)-1)
41.             Retour+=MediaInfoLib::Config.Inform_Get(__T("Audio_Middle"));
42.     }
43.     if (Count_Get(Stream_Audio))
44.         Retour+=MediaInfoLib::Config.Inform_Get(__T("Audio_End"));
45.     if (Count_Get(Stream_Text))
46.         Retour+=MediaInfoLib::Config.Inform_Get(__T("Text_Begin"));
47.     for (size_t I1=0; I1<Count_Get(Stream_Text); I1++)
48.     {
49.         Retour+=Inform(Stream_Text, I1, false);
50.         if (I1!=Count_Get(Stream_Text)-1)

197. Retour.FindAndReplace(__T("|SC8|"), __T(")"), 0, Ztring_Recursive);
198. Retour.FindAndReplace(__T("|SC9|"), __T(","), 0, Ztring_Recursive);
199. return Retour;
200. }

```

函数比较复杂，从代码中我们可以看出，Inform()的实质还是使用Get()一个一个取出所有的属性值。

当指定输出为XML或者是HTML的时候，在输出的字符串上加上相应的标签（例如，输出为HTML的时候，字符串每一行上加上“</tr><tr>”，首尾加上“<table></table>”）

具体每一块代码的含义已经写在注释中了。
