

原 FFMPEG结构体分析：AVStream

2013年11月10日 00:02:04 阅读数：34948

注：写了一系列的结构体的分析的文章，在这里列一个列表：

[FFMPEG结构体分析：AVFrame](#)

[FFMPEG结构体分析：AVFormatContext](#)

[FFMPEG结构体分析：AVCodecContext](#)

[FFMPEG结构体分析：AVIOContext](#)

[FFMPEG结构体分析：AVCodec](#)

[FFMPEG结构体分析：AVStream](#)

[FFMPEG结构体分析：AVPacket](#)

FFMPEG有几个最重要的结构体，包含了解协议，解封装，解码操作，此前已经进行过分析：

[FFMPEG中最关键的结构体之间的关系](#)

在此不再详述，其中AVStream是存储每一个视频/音频流信息的结构体。本文将会分析一下该结构体里重要变量的含义和作用。

首先看一下结构体的定义（位于avformat.h文件中）：

```
[cpp]
1.  /* 雷霄骅
2.   * 中国传媒大学/数字电视技术
3.   *  leixiaohua1020@126.com
4.   *
5.   */
6.  /**
7.   * Stream structure.
8.   * New fields can be added to the end with minor version bumps.
9.   * Removal, reordering and changes to existing fields require a major
10.  * version bump.
11.  * sizeof(AVStream) must not be used outside libav*.
12.  */
13.  typedef struct AVStream {
14.      int index;    /**< stream index in AVFormatContext */
15.      /**
16.       * Format-specific stream ID.
17.       * decoding: set by libavformat
18.       * encoding: set by the user
19.       */
20.      int id;
21.      AVCodecContext *codec; /**< codec context */
22.      /**
23.       * Real base framerate of the stream.
24.       * This is the lowest framerate with which all timestamps can be
25.       * represented accurately (it is the least common multiple of all
26.       * framerates in the stream). Note, this value is just a guess!
27.       * For example, if the time base is 1/90000 and all frames have either
28.       * approximately 3600 or 1800 timer ticks, then r_frame_rate will be 50/1.
29.       */
30.      AVRational r_frame_rate;
31.      void *priv_data;
32.
33.      /**
34.       * encoding: pts generation when outputting stream
35.       */
36.      struct AVFrac pts;
37.
38.      /**
39.       * This is the fundamental unit of time (in seconds) in terms
40.       * of which frame timestamps are represented. For fixed-fps content,
41.       * time base should be 1/framerate and timestamp increments should be 1.
42.       * decoding: set by libavformat
43.       * encoding: set by libavformat in av_write_header
44.       */
45.      AVRational time_base;
46.
47.      /**
48.       * Decoding: pts of the first frame of the stream in presentation order, in stream time base.
49.       * Only set this if you are absolutely 100% sure that the value you set
50.       * it to really is the pts of the first frame.
51.       * This may be undefined (AV_NOPTS_VALUE).
52.       * @note The ASF header does NOT contain a correct start_time the ASF
53.       * demuxer must NOT set this.
54.       */
55.      int64_t start_time;
56.  }
```

```

57.  /**
58.   * Decoding: duration of the stream, in stream time base.
59.   * If a source file does not specify a duration, but does specify
60.   * a bitrate, this value will be estimated from bitrate and file size.
61.   */
62.  int64_t duration;
63.
64.  int64_t nb_frames;          ///< number of frames in this stream if known or 0
65.
66.  int disposition; ///< AV_DISPOSITION_* bit field */
67.
68.  enum AVDiscard discard; ///< Selects which packets can be discarded at will and do not need to be demuxed.
69.
70.  /**
71.   * sample aspect ratio (0 if unknown)
72.   * - encoding: Set by user.
73.   * - decoding: Set by libavformat.
74.   */
75.  AVRational sample_aspect_ratio;
76.
77.  AVDictionary *metadata;
78.
79.  /**
80.   * Average framerate
81.   */
82.  AVRational avg_frame_rate;
83.
84.  /**
85.   * For streams with AV_DISPOSITION_ATTACHED_PIC disposition, this packet
86.   * will contain the attached picture.
87.   *
88.   * decoding: set by libavformat, must not be modified by the caller.
89.   * encoding: unused
90.   */
91.  AVPacket attached_pic;
92.
93.  /*****
94.   * All fields below this line are not part of the public API. They
95.   * may not be used outside of libavformat and can be changed and
96.   * removed at will.
97.   * New public fields should be added right above.
98.   *****/
99.  */
100.
101.  /**
102.   * Stream information used internally by av_find_stream_info()
103.   */
104.  #define MAX_STD_TIMEBASES (60*12+5)
105.  struct {
106.      int64_t last_dts;
107.      int64_t duration_gcd;
108.      int duration_count;
109.      double duration_error[2][2][MAX_STD_TIMEBASES];
110.      int64_t codec_info_duration;
111.      int nb_decoded_frames;
112.      int found_decoder;
113.  } *info;
114.
115.  int pts_wrap_bits; ///< number of bits in pts (used for wrapping control) */
116.
117.  // Timestamp generation support:
118.  /**
119.   * Timestamp corresponding to the last dts sync point.
120.   *
121.   * Initialized when AVCodecParserContext.dts_sync_point >= 0 and
122.   * a DTS is received from the underlying container. Otherwise set to
123.   * AV_NOPTS_VALUE by default.
124.   */
125.  int64_t reference_dts;
126.  int64_t first_dts;
127.  int64_t cur_dts;
128.  int64_t last_IP_pts;
129.  int last_IP_duration;
130.
131.  /**
132.   * Number of packets to buffer for codec probing
133.   */
134.  #define MAX_PROBE_PACKETS 2500
135.  int probe_packets;
136.
137.  /**
138.   * Number of frames that have been demuxed during av_find_stream_info()
139.   */
140.  int codec_info_nb_frames;
141.
142.  /**
143.   * Stream Identifier
144.   * This is the MPEG-TS stream identifier +1
145.   * 0 means unknown
146.   */
147.  int stream_identifier;

```

```

148.
149.     int64_t interleaver_chunk_size;
150.     int64_t interleaver_chunk_duration;
151.
152.     /* av_read_frame() support */
153.     enum AVStreamParseType need_parsing;
154.     struct AVCodecParserContext *parser;
155.
156.     /**
157.      * last packet in packet_buffer for this stream when muxing.
158.      */
159.     struct AVPacketList *last_in_packet_buffer;
160.     AVProbeData probe_data;
161. #define MAX_REORDER_DELAY 16
162.     int64_t pts_buffer[MAX_REORDER_DELAY+1];
163.
164.     AVIndexEntry *index_entries; /**< Only used if the format does not
165.                                   support seeking natively. */
166.     int nb_index_entries;
167.     unsigned int index_entries_allocated_size;
168.
169.     /**
170.      * flag to indicate that probing is requested
171.      * NOT PART OF PUBLIC API
172.      */
173.     int request_probe;
174. } AVStream;

```

AVStream重要的变量如下所示：

int index：标识该视频/音频流

AVCodecContext *codec：指向该视频/音频流的AVCodecContext（它们是一一对应的关系）

AVRational time_base：时基。通过该值可以把PTS,DTS转化为真正的时间。FFMPEG其他结构体中也有这个字段，但是根据我的经验，只有AVStream中的time_base是可用的。PTS*time_base=真正的时间

int64_t duration：该视频/音频流长度

AVDictionary *metadata：元数据信息

AVRational avg_frame_rate：帧率（注：对视频来说，这个挺重要的）

AVPacket attached_pic：附带的图片。比如说一些MP3，AAC音频文件附带的专辑封面。

该结构体其他字段的作用目前还有待于探索。
