

## jQuery 文本编辑器插件 HtmlBox 使用

2013年10月10日 17:12:54 阅读数：15410

jQuery 插件 HtmlBox 使用方式如下：

1.引入头文件（注意一定要把jQuery放在前面）：

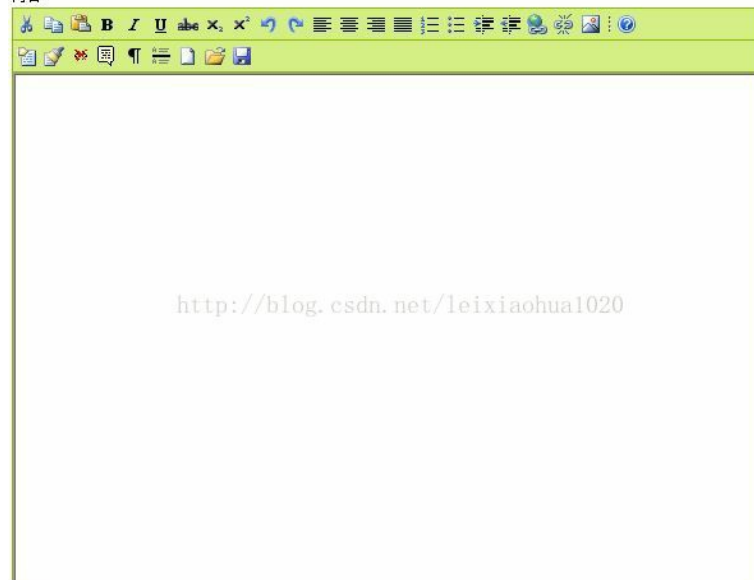

```
[html] 1. <script src="lib/jquery-1.8.3.min.js"></script>
2. <script type="text/javascript" src="lib/htmlbox/htmlbox.colors.js"></script>
3. <script type="text/javascript" src="lib/htmlbox/htmlbox.styles.js"></script>
4. <script type="text/javascript" src="lib/htmlbox/htmlbox.syntax.js"></script>
5. <script type="text/javascript" src="lib/htmlbox/htmlbox.undoredoanmanager.js"></script>
6. <script type="text/javascript" src="lib/htmlbox/htmlbox.min.js"></script>
```

2.在需要使用HtmlBox的<textarea>后面加入javascript代码：

```
[html] 1. <textarea id="htmlbox_icon_set_green" class="text_area2" cols="32" rows="3" name="content"></textarea>
2. <script language="JavaScript" type="text/javascript">
3. var hb_icon_set_green = $("#htmlbox_icon_set_green").css("height","400").css("width","583").htmlbox({
4.     toolbars:[
5.         ["cut","copy","paste","separator_dots","bold","italic","underline","strike","sub","sup","separator_dots","undo","redo","sepa
or_dots",
6.         "left","center","right","justify","separator_dots","ol","ul","indent","outdent","separator_dots","link","unlink","image"],
7.         ["code","removeformat","striptags","separator_dots","quote","paragraph","hr","separator_dots",
8.         {icon:"new.gif",tooltip:"New",command:function(){hb_icon_set_green.set_text("<p></p>");}},
9.         {icon:"open.gif",tooltip:"Open",command:function(){alert('Open')}}},
10.        {icon:"save.gif",tooltip:"Save",command:function(){alert('Save')}}
11.    ],
12.    icons:"default",
13.    skin:"green"
14. });
15. </script>
```

原本的<textarea>就会变成一个功能强大的编辑器。
