■ H.264视频质量评价算法(基于偏最小二乘法回归)

2013年10月19日 16:16:30 阅读数:4893

Zhiyuan Shi等人(这是中国人写的,但是我没看见中文论文,厦门大学的)在论文《Research on Quality Assessment Metric Based on H.264/AV C Bitstream》中,提出了一种使用偏最小二乘法回归(PLSR)计算得出的视频质量评价模型。模型还是挺有参考价值的,在此记录一下。

该论文提出的模型完全依赖于从码流中提取出来的参数,是一个无参考视频质量评价算法。H.264码流结构如下图所示:

http://bFigure 1. H.264 structure ixiaohua1020

该算法选择了以下数值作为视频质量评价参数:

- (1) QP。包括:平均值-- QPavg,中值--QPme,标准差-- QPsd, 最小值-- QPmin,最大值-- QPmax, 10%位-- QP10% , 90%-- QP90%。
- (2) 帧内预测宏块(Intra predicted block)。包括:I4×4所占百分比,I16×16所占百分比。
- (3) 跳过宏块(Skipped macroblocks)。跳过(Skipped)宏块所占百分比。
- (4) I-slice所占百分比。

模型建立过程还没有研究透,先不记录,直接给出结果公式:

$$y_{i1} = 17.94 + \sum_{j=1}^{11} b_j \times x_{ij} \quad (i = 1 \cdots 32)$$

一共有11个参数,每个参数的系数如下表所示:

TABLE I. WEIGHT VALUES AND MODEL PARAMETER

(xj) model parameter	(bj) weight coefficients	(xj) model parameter	(bj) weight coefficients
QPavg	0.137	QP90%	-0.002
QPme	-0.094	%I	-2.003
QPsd	-0.282	%num-skip	-0.001
QPmin	0.004	%I 16×16	0.001
QPmax	0.028	%I 4×4	0.009
QP10%	-0.105	sdn.net/lei	xiaohua10

验证一下该模型的准确性,使用了crownrun,parkjoy,intotree,oldtown四个序列作为测试序列,得到的预测值和主观值之间的关系如下图所示。

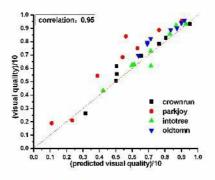

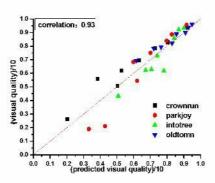

Figure 3. Performance of our NR metric

htt Figure 4. Performance of NR metric[5] aohua 1020

经计算,新提出的模型的皮尔逊相关系数为0.95,高于C. Keimel等人提出的模型(在这里先不细说该模型了)

TABLE II. COMPARISON BETWEEN TWO NR METRICS

Metric	Pearson	RMSE
Our Model	0.95	0.085
NR Model in[5]	/blo _{0.93} dn. ne	71010.0781
